Hi Maia,

Thanks again for your thoughtful review of the EBS flathead sole-Bering flounder complex. We realized our EBS folder didn't have the combined complex time series information for % core EFH disturbed, but I added the CSV file and plot to the folder in case you had a hankering to look them over. Let me know.

Also, if you end up being on the hook for the BSAI Other flatfish complex, those regional folders have the time series data and plots for each species as well as the combined complex data now, too.

Thanks,  
Molly

Thanks for the update, Molly. I apologize I didn't catch that it was non-complex before -- still new to this stock!  
I will make note of your comments in case authorship changes going forward.

MK

Great, thanks! And I know authorship has been shifting a lot so please let folks know I can always do my best to catch them up on the info we have available and what past authors have communicated with us.

~ Molly
